1. The following is an examiner's statement of reasons for allowance: The examiner notes that while some exchange will take place in the mixture taught by JP 04-308791, the degree of ligand exchange set forth in the claims is unlikely to be reached due to the additional steric effects in the coated dry film, as opposed to the relative freedom of motion present in solutions. The teachings of JP 04-308791 leads one to use very similar dyes, rather than different dye in the mixtures. The examiner has reviewed the data of Kambe et al. EP 887202, specifically examples using the mixed ligand C-29 Vs. the similar compound C-31 shown on page 60 of the reference. The differences seem minor in view of the ranges shown in the other data of this table and combined with the other considerations there seems to be little motivation direction one of ordinary skill in the art to the claimed invention.

The examiner notes the case law supplied with the response. The position that only a reasonable level of expectation of success and not a absolute prediction of such in *In re O'Farrell* and *In re Deuel* the accompanying discussion is interesting and continues to reaffirm the position that motivation or direction to make modifications to the references and all the elements of the claims must be present to support the position of unobviousness.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
